metà del seicento inghilterra e francia combattono contro la potenza degli spagnoli e iniziano ad inviare navi corsare in scorribanda per l oceano per combattere

quelle nemiche e danneggiare così il commercio delle loro colonie e nel 1625 due navi con a bordo i primi corsari gettano l'ancora davanti all'isola di San Cristoforo e vi si stabiliscono ma una nave spagnola distrugge dopo cinque anni la loro base e i pochi che riescono a sopravvivere trovano un rifugio all'isola della Tortuga facendone la base di partenza per tutte le loro spedizioni. Gli abitanti di Santo Domingo però vedendo che il loro commercio è in pericolo dopo un attacco riescono a sconfiggerli e ad allontanarli un giorno però i bucanieri e i filibustieri riescono a far ritorno all'isola. Arriva intanto alla Tortuga un nobile italiano circondato dal mistero un certo Emilio signore di Ventimiglia Valpenta e Roccabruna durante un assedio in Europa durante la guerra fra Francia e Spagna gli spagnoli tagliata la ritirata comprano un duca Fiammingo Van Guld ordinandogli di tradire i superstiti italo francesi rifugiatisi in una rocca riesce nel suo malvagio piano ma uccide il fratello maggiore di Emilio che dopo essersi miracolosamente salvato dalla carneficina degli spagnoli per vendicarsi lo insegue nei Caraibi dove lui e i suoi due fratelli diventano il corsaro Nero Rosso e Verde Nero. Il romanzo ha inizio quando due filibustieri Carmaux e Van Stiller vengono ripescati dalla Folgore nave filibustiera appartenente a Emilio di Roccabruna Conte di Valpenta e di Ventimiglia conosciuto come il corsaro Nero una volta a bordo i due raccontano al terribile comandante che suo fratello Enrico di Ventimiglia conosciuto come il corsaro Rosso era stato impiccato nella piazza di Maracaibo per ordine di Van Guld governatore della città. Emilio decide così di recarsi a Maracaibo per sottrarre il cadavere del fratello e reclutati Carmaux e Van Stiller affida il comando della nave a Morgan suo luogotenente dopo aver catturato una guardia spagnola e guadagnato l'aiuto di Moko un africano eremita i filibustieri giungono a Maracaibo dopo numerose avventure il corsaro riesce a rapire la salma del fratello e a rimbarcarsi sulla Folgore dove dopo aver celebrato il funerale del fratello giura solennemente che sterminerà Van Guld e tutta la sua famiglia sulla strada del ritorno per la Tortuga i filibustieri assaltano una nave spagnola che trasporta una bionda fanciulla che si fa chiamare Honorata Willerman duchessa di Weltrendrem di cui Emilio si innamora ricambiato dopo essersi imbattuti in un terribile uragano la nave giunge finalmente alla Tortuga qui il racconto si interrompe e l'autore introduce una parentesi storica citando le imprese di grandi filibustieri realmente esistiti e spiegando cosa siano la filibusteria e la bucaneria. Ha poi inizio il racconto della spedizione per assalire Maracaibo la caccia di Emilio lo porta insieme a Carmaux Van Stiller Moko e il soldato che avevano catturato poco tempo prima promosso a guida del drappello nella foresta vergine lì il gruppo incontrerà coguari e puzzole vampiri sabbie mobili e antropofagi giunti quasi alla meta il soldato e Moko si fermano mentre i tre filibustieri proseguono la caccia seguirà uno scontro contro le forze di Van Guld e l'assalto a Gibralta. Finite queste avventure pericolose il corsaro scoprirà che Honorata è in realtà la figlia di Van Guld e combattuto tra onore e amore farà imbarcare la giovane su una scialuppa e l'abbandonerà in mare con enorme dolore il romanzo si conclude con Carmaux che dice al suo amico Van Stiller guarda lassù il corsaro Nero piange.

bookdown authoring books and technical documents with r markdown presents a much easier way to write books and technical publications than traditional tools such as latex and word the bookdown package inherits the simplicity of syntax and flexibility for data analysis from r markdown and extends r markdown for technical writing so that you can make better use of document elements such as figures tables equations theorems citations and references similar to latex you can number and cross reference these elements with bookdown your document can even include live examples so readers can interact with them while reading the book the book can be rendered to multiple output formats including latex pdf html epub and word thus making it easy to put your documents online the style and theme of

these output formats can be customized we used books and r primarily for examples in this book but bookdown is not only for books or r most features introduced in this book also apply to other types of publications journal papers reports dissertations course handouts study notes and even novels you do not have to use r either other choices of computing languages include python c c sql bash stan javascript and so on although r is best supported you can also leave out computing for example to write a fiction this book itself is an example of publishing with bookdown and r markdown and its source is fully available on github

How Many Feet is 95 Inches? A Comprehensive Guide

This article explores the conversion of inches to feet, specifically focusing on how many feet are equivalent to 95 inches. Understanding this conversion is crucial for various applications, from everyday tasks like measuring furniture to more complex calculations in fields like construction and engineering. We will delve into the process, provide illustrative examples, and address common queries surrounding inch-to-foot conversions.

Understanding the Units: Inches and Feet

Before delving into the conversion, let's establish a clear understanding of the units involved. Both inches and feet are units of length within the imperial system of measurement, commonly used in the United States and a few other countries. A foot is a larger unit than an inch. The fundamental relationship between the two is: 1 foot = 12 inches. This is the cornerstone of our conversion.

The Conversion Process: From Inches to Feet

To convert inches to feet, we utilize the established relationship of 1 foot being equal to 12 inches. The process involves dividing the number of inches by 12 to obtain the equivalent number of feet. For 95 inches, the calculation is straightforward: $95 \text{ inches} / 12 \text{ inches/foot} = 7.916666\dots$ feet. This calculation shows that 95 inches is approximately 7.92 feet. The decimal portion represents the remaining inches that are less than a full foot.

Understanding the Remainder: Inches as a Fraction of a Foot

The decimal part of the answer (0.916666...) represents the fractional part of a foot. To express this more clearly, we can convert it into inches. Multiply the decimal portion by 12: $0.916666\dots \text{ feet} \times 12 \text{ inches/foot} \approx 11 \text{ inches}$. Therefore, 95 inches is equal to 7 feet and 11 inches. This is a more precise way of expressing the

conversion, avoiding the ambiguity of a long decimal value.

Practical Applications: Real-World Examples

Understanding inch-to-foot conversions is relevant in numerous everyday situations. Here are some examples: **Measuring Furniture:** If you're buying a sofa advertised as 95 inches long, you can quickly determine that it's roughly 7 feet and 11 inches long, helping you visualize its size in your living room. **Construction and DIY Projects:** Builders and DIY enthusiasts frequently work with both inches and feet. Converting measurements accurately is vital for precise cuts and ensuring projects fit correctly. For example, cutting a 95-inch piece of wood would require knowing its equivalent in feet for easier calculations with other materials. **Mapping and Surveying:** While metric systems are increasingly prevalent, the imperial system remains relevant in some surveying and mapping applications. Accurate conversions are essential for translating measurements across different units. **Aviation and Nautical Navigation:** Although the metric system is increasingly dominant in aviation, some older specifications and measurements might still use imperial units, necessitating conversions for compatibility.

Advanced Conversion Techniques: Handling Fractions and Decimals

While simple division suffices for most conversions, dealing with fractions and decimals requires a more nuanced approach. For example, if you had a measurement of $95 \frac{1}{2}$ inches, you would first convert the fraction to a decimal (0.5), adding it to 95 (making it 95.5 inches), and then dividing by 12 to get the equivalent in feet. Alternatively, you can handle the fraction separately. 95 inches divided by 12 is 7 feet with 11 inches remaining. Adding the $\frac{1}{2}$ inch gives 7 feet and $11 \frac{1}{2}$ inches.

Summary: The Equivalence of 95 Inches

In conclusion, 95 inches is equivalent to approximately 7.92 feet, or more precisely, 7 feet and 11 inches. Understanding this conversion is essential for various practical applications, from everyday measurements to specialized fields. The process involves a simple division by 12, with the remainder representing the inches left over. Accurately converting between inches and feet ensures precision and avoids errors in projects and calculations.

Frequently Asked Questions (FAQs)

1. Can I use an online converter for inch-to-foot conversions? Yes, many online converters are readily available, providing quick and accurate conversions. 2. Why is the decimal representation of 95 inches in feet not a whole number? Because 95 is not a multiple of 12, the conversion results in a decimal representing the fractional part of a foot. 3. What if I have a measurement in feet and need to convert it to inches? You would simply multiply the number of feet by 12. 4. Are there any potential sources of error in inch-to-foot conversions? Rounding errors can occur when working with decimal values. Using fractions can improve accuracy. 5. What is the best way to remember the conversion factor between inches and feet? Memorizing the fundamental relationship: 1 foot = 12 inches is key. This forms the basis of all inch-to-foot conversions.
